1. RACE NARRATIVE & MATCH REPORT

1.1 Pre-Race Grid & Starting Conditions

The 2024 British Grand Prix commenced under overcast skies at Silverstone, with ambient temperatures of 21°C and a track surface temperature of 38°C — considerably cooler than forecast and a significant factor in tyre degradation profiles throughout the afternoon. Lando Norris (McLaren, Car #4) secured pole position in a dramatic qualifying session on Saturday, posting a lap of 1:25.912 — his second career pole and the fastest ever lap recorded at Silverstone in Formula One. Max Verstappen (Red Bull Racing, Car #1) qualified second, 0.228s adrift, with Carlos Sainz (Ferrari, Car #55) completing the front row after a late improvement on his final flying lap.

Mercedes placed both cars in the top six: Lewis Hamilton qualified fourth (1:26.310) ahead of teammate George Russell in fifth (1:26.489). Oscar Piastri (McLaren, Car #81) started seventh after a wheel-sensor anomaly forced a car change between Q2 and Q3, triggering a five-place grid penalty under Sporting Regulation 40.9.

1.2 Race Start & Opening Stint

At 15:00 local time the lights went out, and Norris made a clean getaway to retain the lead into Copse Corner. Verstappen held second but ran marginally wide at Maggotts, allowing Hamilton to close to within 1.2 seconds by the end of Lap 1. Sainz dropped to fourth after contact with Russell at Village Corner — the stewards investigated but took no further action, ruling it a racing incident.

The opening stint was characterised by high tyre degradation on the Medium compound (Pirelli C3) due to the abrasive surface at Silverstone's resurfaced Sector 2. Verstappen reported blistering on his right-rear tyre as early as Lap 8, prompting Red Bull to consider an aggressive early undercut strategy. Norris, however, managed his Mediums expertly, maintaining a 2.1-second gap to Verstappen while reporting zero blistering to his engineer Will Joseph.

1.3 Pit Stop Window & Strategy Divergence

The strategic phase opened on Lap 14 when Fernando Alonso (Aston Martin, Car #14) pitted from eighth, fitting the Hard compound (C2) in an attempt to extend to a one-stop. Verstappen pitted on Lap 17 in a 2.4-second stop — Red Bull's quickest of the season — emerging on Hard tyres in fourth behind Hamilton, Norris, and Sainz. McLaren responded immediately, pitting Norris on Lap 18. The in-lap was 1:27.341 and the out-lap 1:28.009, giving Norris the net lead by 4.3 seconds over Verstappen.

Hamilton remained out on a heroic 26-lap opening stint on Mediums, Mercedes banking on the undercut protection offered by Norris's slower sector times in clean air. When Hamilton finally pitted on Lap 28, he emerged in third, 6.7 seconds behind Verstappen — a gap that would prove decisive. The two-stop versus one-stop debate would define the race's second half.

1.4 Final Stint & Victory

With 20 laps remaining, Norris led by 8.1 seconds from Verstappen, whose Hard tyres were showing increasing degradation through the high-speed complex. Verstappen's lap times fell to the 1:29 range while Norris continued to lap consistently in 1:27.8–1:28.1. The Dutchman was unable to mount a challenge and instead focused on managing his tyres to protect second place from Hamilton.

On Lap 49, drama struck when Zhou Guanyu (Sauber, Car #24) suffered a hydraulic failure exiting the pit lane, dropping oil at Copse Corner and triggering a brief Virtual Safety Car period. The VSC window lasted only 2 laps and did not materially alter the running order. Norris crossed the line on Lap 52 to claim his maiden Formula One victory by 7.034 seconds — the largest winning margin at Silverstone since 2016. The crowd of 150,000 on race day erupted as their British home hero took the chequered flag.

5. PIRELLI TYRE REPORT & TECHNICAL ANALYSIS

5.1 Compound Allocation & Usage

Pirelli nominated the C2 (Hard), C3 (Medium), and C4 (Soft) compounds for the 2024 British Grand Prix — a step softer than 2023 following extensive tyre modelling data collected during the 2024 pre-season. The decision was influenced by the circuit's resurfaced Sector 2, which introduced higher grip but also higher abrasion rates on the right-rear tyre.

COMPOUND	COLOUR	LAPS OPTIMAL	DEGRADATION	PEAK OPERATING TEMP	NOTES
C2 — Hard	White	20–35 laps	Low	105–115°C	One-stop strategy enabler
C3 — Medium	Yellow	14–22 laps	Medium	95–108°C	Qualifying and race start
C4 — Soft	Red	8–14 laps	High	88–100°C	Qualifying Q1/Q2 only

5.2 Silverstone Circuit Overview

The Silverstone Circuit in Northamptonshire is one of the oldest and most iconic venues on the Formula One calendar, having hosted the inaugural World Championship round in 1950. The 5.891 km layout features 18 corners including the legendary high-speed Copse, Maggotts, and Becketts complexes, where drivers experience lateral g-forces in excess of 5g. The circuit was resurfaced in Sectors 2 and 3 in November 2023, significantly altering tyre behaviour relative to previous years.
